## **BIG IRON DEAL** IN THE SOUTH

Local Syndicate Pledged to Check Out a Princely

DISCOVERIES MEAN MUCH TO STATE OF LITAH

Big Force of Miners Now Prospecting Under the Option.

sensational iron discoveries forty miles east of those of Iron mountain, over which the iron masters have so long sparred, have been added to the acquisitions of a local syndicate which has long figured aggressively in that region, the initial payment, on the authority of the same informants, having been placed to the credit of the venders. Just what figures are to be drawn down by the latter could not be learned, but they are characterized as princely ones and commensurate with the importance of the discovery. Of the latter it is said that it is more significant, perhaps, than any yet recorded in the West, the analyses made by those who are seeking the locations showing the iron to be free from any and all objectionable properties and perfectly adapted to the furnace at which the bessemer is produced. In none of these was more than a "trace" of phosphorus certified, while all the analyses showed it to be free from sulphur and titanium, the returns on the ferruginous contents showing from 60 to 64 per cent. Under the agreement with the discoverers of the new zone on the west the prospecting of the deposits is now progressing, with all the sinew it is possible to intelligently exploit, and that results shall compare with the prodigious ones achieved on from mountain there is everything at this hour to forestell. To the State, said a gentleman who has inquired into the new field, the discovery means more than any previously made, nor does he discount the importance of those that ante-date it. The deposit helds out to the iron manufacturer every element which has been sought by him, while to the blast furnace it helds out laducements that cannot be resisted. It is understood that already negotiations have been opened between the iron manufacturer of the East and the local syndicate in whose favor the option is running, and that representatives of the former promise to appear on the ground in a short time.

FARMER AND SMELTER tions of a local syndicate which has long figured aggressively in that region, the

### FARMER AND SMELTER

Interesting Demonstration on Crops in Zones of Smoke.

in Zones of Smoke.

As if to further emphasize the fact that the smoke from the big Washee smelter at Anaconda, Mont, is not damaging the farms of the Deer Lodge valley to the extent claimed by the ranchers who have brought injunction and damage suits against the Anaconda and Washee companies, preparations are being made to hold a county agricultural fair at Anaconda, the first in the history of that city or county, says an exchange. The date for the opening of the fair is September 21, and the promoters of it propose to make it the finest exhibition of agricultural products and fruit ever seen in the State, and all raised in the "smoke zone." At a recent hearing of one of the damage suits grass four feet tall, grown in some of the tallings and water flowing from the smelter, was introduced in evidence, and then the lawyers for the companies suggested the 'idea of charging the farmers for fertilizer. Judge Hunt, before whom, in the United States court, the main suit against the smelter is pending, and by which it is aimed to permanently enjoin its operation, has completed a personal inspection of the entire valley, and has seen for himself the condition of the farms and live stock within the so-called smoke zone. The ranchers and their attorneys at first objected to the Judge making the trip, or rather refused to give their consent to it, but after thinking it over and realizing the bad effect their objections must have they consented and accompanied the Judge on the tour of inspection. The injunction case will not be heard until late in the fail. The general impression seems to be that the injunction against the smelter will not be granted. The result will be awaited with profound interest in Utah.

A MILL IN SIGHT

## A MILL IN SIGHT

Gold Development Company Arranging for Equipment.

Recent developments at the properties of the Good Development company, out of Maryvale, have been with such gratifying results, said President P A H. Franklin, on the eve of his departure for Philadelphia home of the company's official household, that he has recommended that arrangements begin at once for their Prinklin, on the eve of his departure for philadelphia home of the company's official household, that he has recommended that arrangements begin at once for their equipment with a mill. It was not until President Franklin had subjected the oresto careful sampling that his recommendation was decided on, and that it will be approved by his colleagues is quite conclusive. The ores, said he, are identical with those from which the Annie Laurie of 661d mountain has been leaching gold dollars for a long time, but to finally determine what methods are the best adapted to the ores of the big Development company, the usual tests will be made. It is the intention of the management to continue the blocking out of its ores under a most energetic policy throughout the winter, and as soon as the elements shall permit next spring to begin construction on the proposed mill. Immediately on his arrival in Philadelphia the directors will be called together by President Franklin and the result of his latest observation at camp submitted to them.

## AT THE BRITANNIA.

Mill in Operation and Smelter Being

Overhauled. Advices from George H. Robinson, manager of the Britannia company's mines and mill on Howe sound, B. C., indicate that the first unit in the big concentrator is doing its work in a manner equal to every expectation, the second unit to go into commission the present month Meanwhile the smelter at Crofton is being overhauled and with this accomplished its furnaces will be fired up, the reduction of copper, gold and silver-bearing matter to follow. Ninety days more, said Capt. Henry Stern, and much, at least, for which the founders of the undertaking have been laboring will have been accomplished.

Chamberlain's Cough Remedy Aids Nature.

Medicines that aid nature are always most effectual. Chamberlain's Cough Remedy acts on this plan. It allays the cough, relieves the lungs, aids expectoration, opens the secretions, and aids nature in restoring the system to a healthy condition. It is famous for its cures over a large part of the civilized world. Thousands have testified to its superior excellence. It counteracts any tendency of a cold to result in pneumonia. For sale by all leading druggists.

## NEW TYPE OF PUMP FOR COLUMBUS CON.

Management to Provide Means for Economic Fight Against Water.

With Fred Richmond, mechanical en gineer for the Salt Lake Hardware com sany the management of the Columbu Con of Alta has just placed an order for pump that promises to revolutionize the methods of contending with the waters of that camp. It is what is characterized as a two-stage turbine, to be directly connected with a general electric motor, and which is pledged to throw 300 gallons per minute against a 200-foot head, insu lation to be made that the entire plant may be operated under water. It is claimed for the pump that it will accomplish with twenty-two horse-power all that has been hitherto accomplished with 125 horse-power, the device to be installed on the 200-foot level of the mine, which is now interesting not only the inhabitants of an entire camp, but many prominent investors in this neck of the woods. The first pump of the pattern to find its way into the diggings of this State, the neighbors will be much interested in its behavior. ation to be made that the entire plant

behavlor.

Manager Tony Jacobson will leave for the mines and will again tomorrow morning, accompanied by Clarence K. McCornick and others, and with them will remain several days. Or the well, he reports it now showing a recovery of 83 per cent, and yet its superintendent is devising means that this shall be improved on in a short time. Meanwhile the first-class ore is being forwarded as facilities for its transportation permit.

THE DAY ON 'CEANGE

New York Again Distressed by Rumors of Assessment.

The day on the mining exchange closed the sale of 14,500 shares of stock for \$6992.62, and with the market generally weak, notwithstanding the exceptions. New York was again in distress and in the raid upon it was reduced to 261/2 cents, while Yankee Con. was dealt out to bids of 32 cents, with Swansea parting with a small lot at 24. Grand Central, on favorable reports from the properties of favorable reports from the properties of the company, was shoved up to \$3.25, while Mammoth, its irrepressible adversary, was shorted down to \$1.00, with the talent guessing on rumors that the Supreme court was about to hand down a decision that would terminate the scrap. Silver Shield presented its adherents with a loss of a cent a share, while Lower Mammoth held up to 20½ and Carlsa up to 10½. May Day was in light demand around 9 cents, and Butter-Liberal at 11½, the day closing on the following market:

## GOING TO DEPTHS IN OLD MOSCOW

Mr. Cullen to Fathom the Ledges of the Southern Property.

HAS ORDERED MACHINERY DELIVERED AT THE MINES

Old Camp to Be Aroused and Allowed to Repeat Its Record.

To fathom the ledges by which the Burning Moscow of Beaver county is fis-Burning Moscow of Beaver county is fissured, Mr. Matt Cullen will equip them at once. To that end an order was yesterday placed with Fred Richmond of the Salt Lake Hardware company for a gasoline engine of twenty-five-horse power, the machine to be erected at once and sinking to follow. With this in commission the experienced owner of the Burning Moscow, who has never considered it as other than the foundation of one of the most productive mines in the State, will drop down several hundred feet lower at once. Aiready has Mr. Cullen, who was one of the original owners of the great Horn Silver, opened up the main ledge in the Moscow for several hundred feet on its strike and that it continues to great depth there is everything to denote. From it he is now coming to the local market with a class of ore the metallic contents of which are much in excess of the average, while the fissure from which it is dug is an exceptionally strong one.

With this as a nucleus Shaunite, at which camp the Moscow is located, is promised an awakening to which all the patriarchs who have stuck to it have locked forward, and another year should be characterized by most important developments. It is said of the camp, the buillon record of which compares with that of many in the State, that upon its counters are many bargains and while all of them have been productive, but few have ever fathomed the main ore todies. To maintain his rights and assert his title to the Moscow, Mr. Cullen has had to do not a little fighting in the forous of the law, and that another fortune is being piled up by him mining circles throughout will rejoice. sured, Mr. Matt Cullen will equip them at

### MAMMOTH-CENTRAL

Not Much Confidence in Story of Decision.

Decision.

In a rumor that advices from the inner chambers of the Supreme court indicated an early rolling on the scrap between the Mammoth and Grand Central of Tintie, counsel for the combatants were not inclined to repose much confidence during the day. The Supreme court is not in the habit of bulletining its intentions, said one of the attorneys in the case, and if it has thought of handing out something the chatter is more apt to provoke a further delay than is it to hasten it. The advance in the shares of Grand Central during the day was superinduced, it is claimed by one of the more prominent interests, by conditions underground. Of these it is said that they are exceptionally gratifying. That the talent thought it discreet to storm Mammoth and to short its shares in the same breath was a condition in view of the report that a decision was about to issue, that no one was bold enough to utter a suspicion if he entertained one. was bold enough to utter a suspicion in he entertained one. It is understood that Judge Bartch is to leave for the East the present week, to absent himself the remainder of the month among old friends and associates in a number of mining enterprises.

## MACBETH ON ALTA.

Astonished at the Tremendous Showing in Camp.

Ravenel Macbeth, the expert mining engineer who has been conducting an examination of Alta properties, has re-turned from camp astonished that every opportunity there has not been swept from the bargain counters. The deopportunity there has not been swept from the bargain counters. The developments in the Columbus Con. were something, said he, for which he was not prepared. They astounded him. From a breast of ore four and a half feet he took samples which showed an average of more than \$100 per ton. One sample, picked, gave him as much as \$33.5 ounces silver, 24.7 per cent copper and \$8.40 gold per ton. Another picked sample afforded \$67 ounces silver, with 35 per cent copper and \$2.00 gold per ton. Mr. Macbeth says of the camp throughout that it is one of the most meritorious into which he has ever looked. It is a misdemeanor, indeed to seek an opportunity elsewhere until every one in Alta has been exhausted.

## MACHINERY FOR ELY.

Another Prospective Bonanza Orders Equipment.

ders Equipment.

Edward Millard, who has for some time profitably cyanided the tailings from the old Chainmon mill at Ely, Nev, is in the city, purchasing machinery with which he is to equip a proposition that promises much, and upon which he is to prosecute work along most vigorous lines. Mr. Millard has been identified with the mines of that camp for many years, and with the result of operations since its rejuvenation was begun is very much pleased. Ahead of the camp, indeed, he sees a most productive condition and not a few old friends here will rejoice with him in its raily

Ore and Bullion. In the ore and bullion market the day's settlements amounted to \$78,109, McCornick & Co reporting them as they follow; Bullion, \$37,909, gold bars, \$3900; gold, silver, lead and copper ores, \$37,200. In the metal market, silver ruled at \$2 cents an ounce, lead at \$1.85 per hundred pounds and casting copper at \$15% cents an ounce. A tick over the private wires of Pol-lock Co. during the day says the copper market is weak, the lead market dull.

Seven Feet of Ore.

A seven-foot ledge of fine ore is reported to have been encountered in the Geldermine, owned by Henry Welland and John Bingham, says the Record of Ploche, Nev The owners will not let anybody in the mine since the big strike. The mine is situated two miles west of town. Pat Christian londed up with a month's supply of groceries and went to Bristol, where he will fig the ore which has been taken from Bristol Copper company's mines.

Take No Substitute.

## SENSATION LIKELY IN SMOKE SUITS

Damages Claimed by Farmer Said to Be Criminally Excessive.

By those professing to have outwitted he sentries and obtained an entrance to he ante-chambers, it was said during the afternoon that the smelting companies have decided that the army of farmers who have been suing them for damage to their crops have deliberately exaggerate their losses and that in the desperate on their losses and that in the desperate en-deavor to sustain their position they have dealt too recklessly with the oath that the blind goddess exacts. To rebut this it was said last night that the smelling companies have decided to unite in an application to the court for a grand jury and that testimony will be introduced to establish that perjury has been com-mitted in not a few instances by those who have made affidavit to damages that have been inflicted on their farms. It is also said that some of those upon whom the united companies will train their guns, that they have sworn falsely to the have been inflicted on their farms. It is also said that some of those upon whom the united companies will train their guns that they have sworn falsely to the effect of the smelter smoke upon live stock. In support of this the evidence of scientists whose testimony was introduced in a similar scrap between the farmer and smeltermen in Montana will be introduced. These scientists claim that careful analysis has resulted in irrefutable proof that the smoke has absolutely no ill effect upon cattle or other live stock. That this has been decided on by the smelters, who have been so yiciously harassed by the farmer who has been suddenly bereft of an income of 20,000 or more annually, cannot be verified by those from whom the rumored proceeding is to emanate but that it is their intention is not at all unlikely. The representatives of the smelters cannot be represented because of their refusal to discuss if nor can the attorneys who have been taught so much since the smelter appeared in the valley upon the profits of farming. It was said during the afternoon that reputable farmers, conversant with the best crops of which the valley has shown itself capable, have consented to tell the story to a grand jury and that along these lines the smelters will resent the liputate to which it is claimed they have been submitted. Whatever the merits of the story, it will undoubtedly create a sensation.

In Montana, where the smelters have been subleyted to some of the most merci-

create a sensation.

In Montana, where the smelters have been subjected to some of the most merciless extortions, the industry has found it necessary to resent them in a manner such as is now outlined in this State, and the result has been some of the bitterest lessons. Developments will be eagerly awaited.

Gibraltar's Rich Rock.

Telling of developments at Rhyolite, a corre spondent says of those on the Gibraltar, controlled in this city: A shaft now being sunk on trolled in this city. A shaft now being sunk on vein No. 4 has struck a rich body of ore that runs in value from \$150 to \$100 per ton, as shown by the asseys, and this rock will be sacked with a view to early shipment. The shaft is only down five feet, and the vein is widening at every foot sunk. When the fact is taken into consideration that the hig values were found in the Comstock lode at the 1000 and 1200-foot levels, and that wherever a shaft has been sunk on Honanza mountain it has always been found that the vein levels. has been sunk on Bonanza mountain it has al-ways been found that the veins increase in width as they go down, the possibilities will be better understood. The place where this shaft is being sunk on the Gibrailar is only removed 400 fest from the Hobo claim of the Eclipse Mining company, where ore of the same character and value is being sacked at the forty-foot level, from a vein that is fully fifteen feet wide and bears evidence of pene-trating to an enormous depth.

Sale of Silver King. An important deal has just been closed for the Silver King group of six claims, seven miles southeast of Beatty, and adjoining the Decilion on the southeast There is a regular quartz lode on the property. An assay has been obtained as high as \$548 on the Ida claim. An average assay on six veins on the group went \$115. S. McFachen of the Sunday-Nevada group negotiated the deal, the buyers heing himself and prominent Eastern men, one an ex-United States Treasurer and two ex-Governors of Ohio. The previous owners were J. J. Brogan. Fred Sweeney and Fred Burner of Beatty, who received part cash and part stock in the company to be formed. Mr. McEachen states that work will be started at once and that he expects to have considerable shipping ore before Christmas, says the Miner of Beatty, Nev. for the Silver King group of six claims,

Sold Hawthorne Mine.

Sold Hawthorne Mine,

The famous mine of Mrs. Fermina Sarras, located in Esmeralda county, south of Hawthorne, was sold in Reno yesterday to a Hoston syndicate represented by Edward Mellen and H. F. Quint, for 190,000. Of this large amount \$10,000 in cash was paid over to this old Mexican woman, and the remaining \$20,000 is to be paid within a short time or the property is to revert to her. The deal was carried through at the Hotel Golden, where all the parties were stopping. Immediately after completing the deal the Boston parties left to report to their company, and Mrs. Sarras left the city to stop for a few days with Mrs. Read, who lives at the mouth of the canyon east of Reno, says the Reno Gazette.

Hornblower & Weeks Copper Letter. BOSTON, Mass. Sept. 7.—There was a small wave of liquidation to be seen in the local market this morning. Brokers generally had selling orders throughout the list but they were not large. Very good support was found in most places and recoveries soon followed the early selling movement. The market was inclined to be quiet after the first hour and a steadily improving condition showed itself. Closing prices were at the best.

Mining Notes.

Mining Notes.

Of the future of copper, Willis McCornick says the authorities in New York are unantmous in their prediction of still higher prices. Ernest Hamberger, manager of the Daly West, left for its mines and mills at Park City again yesterday morning.

Mill Manager Bettles has returned from the plant and properties at Newhouse and reports everything in most satisfactory condition. The day's reports from the Yampa smelter Bingham, all told of most satisfactory results. The management of the Wort Mining com-

### The Holdfast Household Rubber Glove

Is a new idea which is bound to prove popular with the housewife. We are the first to show this article, which is manufactured by a new process with the surface rough, preventing slipping when the glove becomes wet.

Something of this kind has been needed for a long time, and the low price of \$1 a pair should prove very attractive.
